

17th January 2007

TechRentals notes the impact of climate change on cooling system maintenance.

As Australian weather becomes more unpredictable and we're recording higher temperatures than previously, effective cooling systems are becoming more important in both residential and commercial premises. And with weather conditions continuing to change their usage will continue to increase; placing more damage on our systems, making them more susceptible to faults, and general wear and tear.

Test equipment specialists TechRentals deals with many cooling system specialists and have noted an increased demand over recent months as existing systems struggle under the heat waves which have been hitting many parts of the country.

The two issues affecting cooling systems which we are asked about most are effectiveness and efficiency. The effectiveness of the system impacts on the quality of air being produced, thus on the comfort levels of those around in the home or business. An inefficient cooling system can lead to additional costs through maintenance or even extraordinary power usage.

Simple issues like air quality, gas leaks, airborne dust and particles, or air pressure affect not only the cooling system but also all the people utilising it. These issues can all be measured, monitored and rectified with the right equipment.

Specialised measuring equipment such as balancing meters, airborne dust monitors, refrigeration testers and gas detectors can help extend the lifetime of cooling systems. Equipment can be rented for as little as one day, or as long as needed.

Technicians can test for:

- Air flow and quality
- Dust levels
- Water quality
- Gas and refrigerant leaks
- Air pressure
- Temperature and humidity levels
- Power usage
- Electrical faults

With over 10,000 items in their specialised rental inventory, TechRentals has all the equipment required to check cooling and air conditioning systems. For more information

About TR Corporation

TR Corporation is a dynamic Australasian organisation delivering specialised technology solutions to blue chip commercial and government clients, via six major brands;

- TechRentals (test and measurement rental)
- VMS (calibration and asset management)
- TR Telecom (satellite & wireless connectivity)
- Bearcom (radio communications)
- Minecom (mining communications), and
- TR Vidcom (Audio visual and computer equipment).

The group has over 20 locations across Australia, New Zealand and Malaysia, staffed by experienced personnel covering equipment rental, sales, engineering and maintenance services. TR Corporation is owned by Advent Private Capital, an experienced equity group listed on the Australian stock exchange.
